Professional Summary

Data & BI analyst with an **MSc in Business Analytics & Digital Transformation**, a Computer Engineering background, and **an experience in enterprise IT** in process digitization and data access governance. Skilled in SQL (MySQL, BigQuery), Power BI (data modeling, DAX, row-level security), Tableau, Looker Studio and Python, with portfolio projects that turn raw data into models, pipelines and dashboards that support business decisions.

Education

MSc in Business Analytics & Digital Transformation – Asian Institute of Technology *May 2026*
Relevant Coursework: Big Data Analytics, Storytelling Using Data, Global Data Management, Digital Marketing & Consumer Analytics, FinTech

BEng in Computer Engineering & Information Technology – Yangon Technological University *Mar 2020*

Technical Skills

SQL
Data Cleaning & Deduplication, CTEs, Window Functions, Views, Temp Tables, Staging Tables, Joins, Conditional Aggregation, Regex

Power BI
Power Query, DAX Measures, Star Schema Data Modeling, Row-Level Security (RLS), Interactive Reports

Python
Pandas, Web Scraping, Requests, BeautifulSoup, Data Pipelines, CSV Automation

Tableau & Looker Studio
Interactive Dashboards, Time Brushing, Parameters, Heat Maps, Pricing & Demand Analysis, Looker Studio Dashboards

Excel
Pivot Tables, Slicers, Timelines, Dashboards, Lookups & Nested Formulas, Data Cleaning

Databases & Cloud
MySQL, Google BigQuery, Microsoft Azure, AWS

Projects

Iowa Spirits: Convenience Store Category Review – BigQuery SQL, Looker Studio *(Personal Project)*

- Modeled **7.7M real store purchase records** in BigQuery as a **star schema**; built and validated a store-type classification from store names (unclassified sales cut from **16.5% to 4.4%**), then ran same-store, volume-vs-price and category-index analyses.
- Found convenience stores' share gain came only from **85 net new stores** (same-store sales −4.7%, volume −7.7%), and recommended reallocating shelf space to growing, under-sold categories in small formats, an opportunity of **up to ≈ $4,000 per store per year**, presented in a Looker Studio dashboard.

Sales, Fulfilment & Marketing Data Model – Power BI, Power Query, DAX *(Personal Project)*

- Redesigned a 21-sheet workbook into a **multi-fact star schema** (**5 facts, 7 dimensions, 23 relationships**) with a bridge table and role-playing dimensions.
- Built **39 DAX measures** and **dynamic row-level security** (user-to-region mapping), giving stakeholders a single source of truth for sales and marketing performance.

Global Layoffs Data Cleaning & EDA – MySQL, SQL *(Personal Project)*

- Cleaned global tech layoff records in **MySQL** (staging tables, deduplication, self-join imputation) and built rolling views with **CTEs and window functions** across **383K layoffs**.
- Found a tech correction peaking in Jan 2023 (**22% of all layoffs** in one month) and used **DENSE_RANK()** to show a shift from travel and gig firms to Big Tech, signaling that workforce risk had moved to over-hired tech firms.

London Bike-Share Demand & Weather Analysis – Python, Pandas, Tableau *(Personal Project)*

- Built an **automated Python ETL pipeline** merging **17,000+** hourly bike-share records with weather data (19.9M rides) and a **Tableau dashboard** with a moving average, time brushing, and a temperature × wind heat map.
- Found demand **more than doubles** from winter (~16K rides/day) to August (~38–40K), peaking at 10–20°C, informing seasonal fleet sizing.

Work Experience

IT Officer – Toyota Tsusho Aye and Sons Co., Ltd. – Yangon, Myanmar *Jun 2023 – Apr 2024*

- **Gathered finance requirements** and analyzed the paper-based procurement approval process (~10 departments, ~20 approvers), then worked with vendors to deliver a **multi-level electronic workflow**, cutting approval time from **half a day to under 15 minutes**.
- Managed **role-based access controls** for **~40 employees**, ensuring users accessed only the data and systems their roles required.
- Maintained asset, lifecycle, and expenditure data for **~60 corporate IT devices**, using it to plan procurement and **keep IT spending within budget**.

IT Assistant – PRO1 Global Home Center Co., Ltd. – Mawlamyine, Myanmar *Jan 2023 – May 2023*

- Configured role-based permissions for **~50 users** on in-house **ERP and POS systems**, gaining hands-on exposure to retail sales and inventory data, and resolved system issues to minimize store downtime.

Certifications

Architecting Solutions on AWS (2023) | **Microsoft Azure Fundamentals** (2020) | **Excel Skills for Business** (Macquarie, 2020)

Languages

Myanmar (Native) | **English** (C2 Proficiency)
